Pleated Sediment Filters

Pleated Filters are an alternative to string wound or spun melt blown filters. These filters are economical, multi-use, premium quality products that are available in various micron ratings ranging from 50-micron down to 5 Micron

They remove very efficiently mechanical pollutants from water and they are perfect for those applications which require larger flows.

Cartridges are made of pleated polypropylene non-woven fabric, which provides them with a better efficiency than other sediment cartridges. Once they get clogged, all you have to do is to rinse them with water and clean. Then, you can re-install them.

- remove sediments such as sand, silt, rust
- reusable (up to 6 times after washing)
- BPA free
- for installations requiring high efficiency
- made of pleated polypropylene

Size	SL10	BB10	BB20
Service life	6 months	6 months	6 months
Efficiency	25 (l/min)	40 (l/min)	60 (l/min)
