15WQS Quartz Sleeve to fit Liff P15N, FP20N

A quartz sleeve works by protecting the UltraViolet bulb from the water. O-rings create a watertight seal to keep the water out of the light fittings. We recommend that when changing the sleeve, the o-rings and Teflon washers are changed too, to ensure a secure leak free connection.

UV sleeve cleaning & replacement – Clean every year replace every 2-3 years

Water running through a UV system often carries minerals and sediment. These contaminants will eventually build up on the UV quartz sleeve that protects the UV lamp. This build-up will cloud the sleeve and inhibit the UV light from penetrating the water – allowing microorganisms to pass by without being killed. In order to keep the quartz sleeve clean and operating well, the glass must be cleaned regularly – at least yearly when the lamp is changed. However, cleaning may need to occur more often depending on water quality. It is recommended that the sleeve be replaced every 2-3 years
